- Roll(s) will be packed for transport
- You will be advised of the readiness for dispatch

Your benefits

- Constant grinding action
- Optimal yield
- Long life cycle
- Restore the value of your machines
- Quick service
- Local presence

Roll Service in our local Service Stations. New and reconditioned rolls for top grinding action.

Our services – your benefit

Upon receipt of your rolls, they will undergo careful checking to determine possible damage. You will be informed about any defects, which will be corrected if possible. Special attention is paid to the roll journals, checking them for worn bearing seats, etc.

When corrugating (fluting) the rolls, the material will be spared. This means that not more material than necessary will be removed in order to restore the accuracy of the corrugations. This will increase the life cycle of your rolls.

After machining the rolls, the new diameter will be determined. This will provide you with precise information for the reinstallation of the roll in your system.

When leaving our service station, your rolls have been beveled. This ensures smooth running of the reconditioned rolls.

Our offer includes the following services:

- Cleaning of the rolls
- Technical check (journals, etc.)
- Grinding
- Beveling
- Cambering, frosting, corrugating (fluting)
- Corrosion protection
- Packing
